

Lab 5 – Docker-compose

1. Create docker-compose yaml file to configure wikimedia application's services :
 - wiki_app :
 - Image : wiki_app
 - Persistent volumes : */usr/share/nginx* and */var/log/nginx*
 - Publish ports : 80 → 8000
 - wiki_db :
 - Image : wiki_db
 - Publish port : 3306 → 33066
2. Using docker-compose command, create and start containers.
3. Using docker-compose command, stop and remove containers, networks, and volumes.
